Tricefy

Tricefy Uplink Requirements

Last Modified on 2024-01-24 13:51

Tricefy Uplink has minimal requirements:

1. An account with Tricefy (user name and password)

2. Internet connection with "broadband speed" or better.
     - **Tip:** Faster internet connections will result in faster uploads

3. DICOM - licensed ultrasound system(s) connected to an active network
     - The ultrasound system and Uplink software host must be able to talk to each other over the network

4. A computer, server, or virtual machine for running the software. Tricefy Uplink can be run in conjunction with other applications and does not need a dedicated computer.
     - Windows Requirements:
          - Windows 10 or later | Windows Server 2016 or later **(previous versions are no longer supported)**
          - 100 MB of disk space necessary for uplink assets and temporary file processing
          - Static IP Address

     - Mac OS Requirements:
          - macOS 10.14 (Mojave) or later
          - 100 MB of disk space necessary for uplink assets and temporary file processing
          - Static IP Address

5. Up-to-date modern browsers for viewing Tricefy on a computer or mobile device
     a. Supported browsers
          - Chrome
          - Firefox
          - Edge
          - Safari
     b. Using an out-of-date browser will redirect to the mobile version of Tricefy for security purposes

     Note: Internet Explorer is no longer be supported as of April 2022
