

Last Modified on 02/26/2018 6:27 pm EST

Multiple studies can be shown in the viewer using a split-screen format. This feature allows you to compare studies.

There is not a limit on how many studies can be opened at once, however opening too many studies can make it difficult to view them since there is limited screen space.

To compare studies, select multiple studies on your Studies screen by holding down the **Cntrl** button on your keyboard (Mac users hold down the **Command** button). Selected studies will be highlighted **blue**.

If the side panel is open, like in the screenshot below, the selected studies will be listed:

All A	ccounts	Ratients 🗎 Studies	Consults						e 🖷 Tra	cefy	Q ~
Stu	dies		Compa	re Send to v	+~	¢ 0					
		Full Name	Study Date ~	Status	Study Details	Study Created		Patient Name	Study Date & Time	Files	Size
Ŧ		Doop Corold	2018-02-21 5:21 PM MST	None		2018-02-21 5:22 PM MST		Dean Gerald	2018-02-21 5:21 PM MST	0 of 0	0 B
	,	Dean Geraid						Dean Gerald	2018-02-21 4:14 PM MST	1 of 1	87 KB

- Select Compare to open all the selected studies in the viewer
 - You can either select the **Compare** button in the side panel or the **Compare** button that becomes available at the top of the screen (shown in **red** box)
- Select Clear Selection to un-select the studies

Specific thumbnails within a study can be compared by opening each study and selecting only the desired thumbnails. In example below, only five (out of 42) images are selected from the top exam and one image is selected from the bottom exam. These numbers are shown in the side panel:

Treefy Comparing in the Viewer

Viewer functionality remains the same when comparing studies, except thumbnails, study list and side panel do not display.

Below are some examples of different configurations while comparing studies:
