# Step 2: Configure your Vscan

Last Modified on 05/09/2017 10:41 am EDT

After you install Tricefy and activate your Vscan, you will see  Tricefy listed under Server Settings:

**Settings**
What would you like to change

Set Current Preset as Default
Cardiac

Server Settings

Worklist Server
                                    Verify

Tricefy
Cloud Dicom Image Server        Verify

**Server Settings**
Press and hold to add as favorite

🗑                              ⊕

**Image Server**              Wor

Cloud Dicom Image Server

To make sure your Vscan can communicate with your new Tricefy server, tap  **Verify** to perform a test.

If everything is working correctly, a  **Verify OK** message will display.

- If your test does not work, make sure your Vscan is connected to the internet

# Make it your Favorite

Tap and hold the  **Tricefy** button (listed under your Server Settings, as shown above) to make it your "favorite" (default) server.  Select **Add** and your examinations will automatically upload to Tricefy!

**Add Server as Favorite?**

CANCEL                    ADD

**Image Server**              Wo

Tricefy
Cloud Dicom Image Server

You will know that Tricefy was successfully added as your favorite because it be marked with a star.

Remember, in order to save an examination to any server using the Vscan, patient data for that exam must be entered.

👉 Move to Step 3: Enter Patient Data
