

Templates - Editing Titles, Headers and Labels

Last Modified on 11/04/2019 1:42 pm EST

To get started customizing your template, it is recommended to begin with the Tricefy global template that best fits your needs. Changes to your template are automatically saved.

The template editor should not be used with tablets and mobile devices.

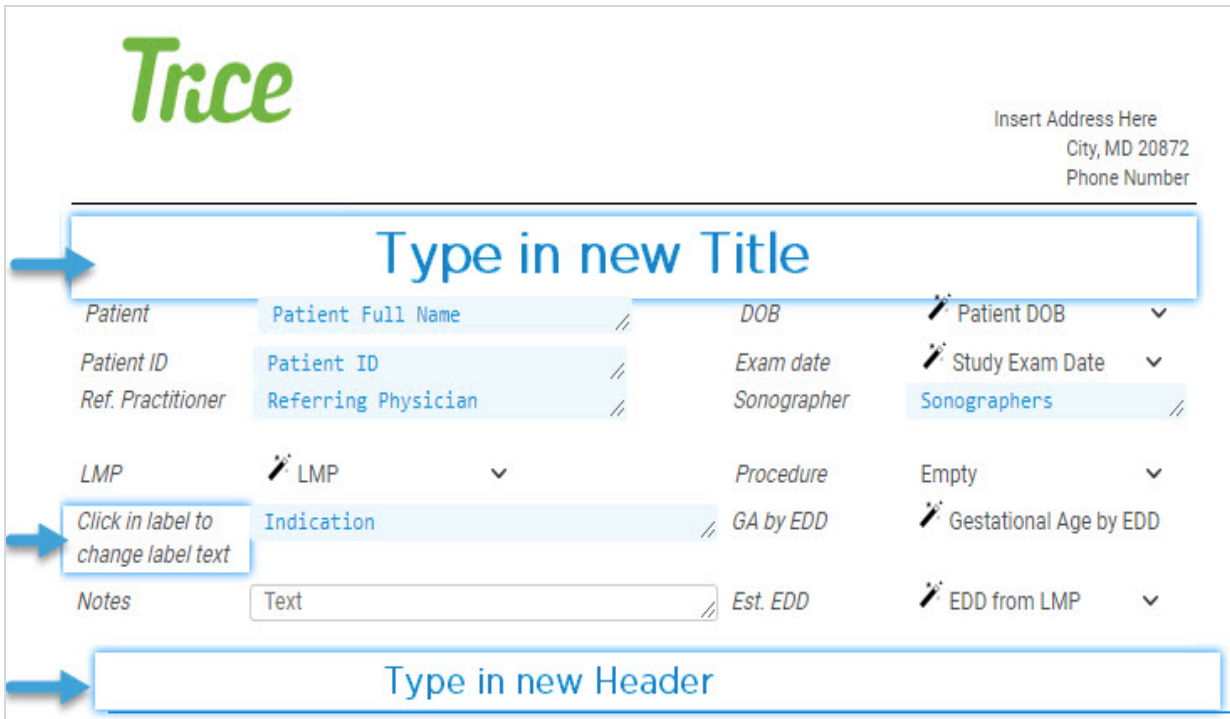

Titles and Headers are used to organize the templates.

 [Learn how to add titles and headers](#)

Labels are used before a form field to explain what should be entered into the field. In the example below, "Patient" and "DOB" (shown below in the red boxes) are labels and indicate that the patient's name and birth date should be entered into those fields, respectively:

Patient	Patient Full Name	DOB	Patient DOB
----------------	-------------------	-----	-------------

To change the name of a title, header or label, click on it to make it editable:

When a title, header, or label is editable, you can enter new text and adjust the color, size and alignment

using the Text settings in the right sidebar:

Biophysical Profile

Qualitative AFV	2	Growth Body Movement	2	Total	8
Fetal Tone	2	Fetal Breathing Movement	2	Empty	▼ Fetal Doppler //

Fetal Anatomy and Radiometry

Fetal anatomic and biometric evaluations were not performed on today's exam.
